Given that the non-binary population is a small population, data aggregation is necessary in order to protect the confidentiality of responses provided by the Canadian population. Most 2021 Census information is disseminated using a gender binary variable. In these cases, people in the 'non-binary persons' category are distributed among the other two gender categories and are denoted by the + symbol.

Given that the non-binary population is a small population, data aggregation is necessary in order to protect the confidentiality of responses provided by the Canadian population. Most 2021 Census information is disseminated using a gender binary variable. In these cases, people in the 'non-binary persons' category are distributed among the other two gender categories and are denoted by the + symbol.

Given that the non-binary population is a small population, data aggregation is necessary in order to protect the confidentiality of responses provided by the Canadian population. Most 2021 Census information is disseminated using a gender binary variable. In these cases, people in the 'non-binary persons' category are distributed among the other two gender categories and are denoted by the + symbol.

Given that the non-binary population is a small population, data aggregation is necessary in order to protect the confidentiality of responses provided by the Canadian population. Most 2021 Census information is disseminated using a gender binary variable. In these cases, people in the 'non-binary persons' category are distributed among the other two gender categories and are denoted by the + symbol.

Given that the non-binary population is a small population, data aggregation is necessary in order to protect the confidentiality of responses provided by the Canadian population. Most 2021 Census information is disseminated using a gender binary variable. In these cases, people in the 'non-binary persons' category are distributed among the other two gender categories and are denoted by the + symbol.

Given that the non-binary population is a small population, data aggregation is necessary in order to protect the confidentiality of responses provided by the Canadian population. Most 2021 Census information is disseminated using a gender binary variable. In these cases, people in the 'non-binary persons' category are distributed among the other two gender categories and are denoted by the + symbol.

Given that the non-binary population is a small population, data aggregation is necessary in order to protect the confidentiality of responses provided by the Canadian population. Most 2021 Census information is disseminated using a gender binary variable. In these cases, people in the 'non-binary persons' category are distributed among the other two gender categories and are denoted by the + symbol.

Given that the non-binary population is a small population, data aggregation is necessary in order to protect the confidentiality of responses provided by the Canadian population. Most 2021 Census information is disseminated using a gender binary variable. In these cases, people in the 'non-binary persons' category are distributed among the other two gender categories and are denoted by the + symbol.

Given that the non-binary population is a small population, data aggregation is necessary in order to protect the confidentiality of responses provided by the Canadian population. Most 2021 Census information is disseminated using a gender binary variable. In these cases, people in the 'non-binary persons' category are distributed among the other two gender categories and are denoted by the + symbol.

Given that the non-binary population is a small population, data aggregation is necessary in order to protect the confidentiality of responses provided by the Canadian population. Most 2021 Census information is disseminated using a gender binary variable. In these cases, people in the 'non-binary persons' category are distributed among the other two gender categories and are denoted by the + symbol.

Given that the non-binary population is a small population, data aggregation is necessary in order to protect the confidentiality of responses provided by the Canadian population. Most 2021 Census information is disseminated using a gender binary variable. In these cases, people in the 'non-binary persons' category are distributed among the other two gender categories and are denoted by the + symbol.

"Census" refers to Statistics Canada's Census of Population. The Census is conducted every 5 years.

The Statistics Canada Census data does not include non-resident post-secondary students and other foreign/temporary residents.

The Statistics Canada Planning District boundaries do not necessarily match the City of Waterloo's District Plan boundaries, nor do all of the Planning Districts have a corresponding statistical profile.

Statistics Canada data is subject to rounding for the purposes of confidentiality. Therefore, some totals may not be exactly the same as the sum of the values shown, especially when comparisons are made between tables.
